

**I. Amendments to the Specification**

Please replace the paragraph beginning at page 11, line 20 (i.e., the eighteenth line of text) with the following amended paragraph:

The opening means may comprise a cutting member 13 e.g. protruding from connector device 1 in a direction towards laminated paper packaging system 4, in particular towards cover 10. Upon connecting connector device 1 to laminated paper packaging system 4, e.g. by pressing connector device 1 thereto and/or by screwing connector device 1 onto frame-like member 11, cutting member [[10]] 13 cuts laminated paper packaging system 4 thus establishing a passageway for the fluid from the interior of laminated paper packaging system 4 through connector device 1 into feeding line 2 of enteral administration set 3.
